ABSTRACT

A network browser graphical user interface is provided for use in association with a network browser. Included is a network browser window associated with a network browser for displaying content associated with uniform resource locators (URLs) during network browsing. Also displayed is a plurality of identifiers adjacent to or separate from the window in which the content is displayed. In use, a user is allowed to pre-select at least one of the identifiers. Moreover, after the pre-selection, content associated with at least one URL displayed during use of the network browser is correlated with the pre-selected identifier.
